

Carbon Reduction Plan

Supplier name: Blink Medical Ltd.

Publication date: 11th May 2026

Commitment to achieving Net Zero

Blink Medical Ltd. is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2023

Additional Details relating to the Baseline Emissions calculations.

Blink Medical is an SME located in the West Midlands. Our operations comprise of a cleanroom dedicated to kit packing, a warehouse for finished goods, raw material storage, and office spaces to accommodate all remaining functions. We do not have multiple site locations and travel is generally minimal and reserved for supplier/customer visits.

Our scope 1 and 2 emissions are relatively low as we only consume electricity from the grid in all our operations. These emissions were calculated using EcoVadis carbon calculator and have been validated through the portal.

Our Scope 3 emissions are comprised of Category 4 - Upstream transportation and distribution, Category 5 - Waste generated in operations, Category 6 - Business travel, Category 7 - Employee commuting, Category 9 - Downstream transportation and distribution.

Baseline year emissions: 2023

EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	17.50
Scope 2	26.90

Scope 3 <i>(Upstream transportation and distribution Business travel Employee commuting, Downstream transportation and distribution and Waste generated in operations)</i>	122148.40
Total Emissions	122204.28

Current Emissions

Reporting Year: 2025	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	30.3
Scope 2	53.8
Scope 3 <i>(Upstream transportation and distribution Business travel Employee commuting, Downstream transportation and distribution and Waste generated in operations)</i>	470248.696
Total Emissions	470332.796

Emissions reduction targets

Blink Medical is committed to achieving net zero emissions by 2050 in alignment with NHS England targets. In 2024, we started our journey towards achieving net zero emissions and therefore whilst we continue to take every effort to formulate a realistic carbon reduction plan, we realise that we are at the beginning of our journey and timelines, key initiatives, and specific year reduction absolute targets may vary as we become more mature.

We project that carbon emissions will decrease over the next ten years to 38348 tCO₂e by 2035.

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Carbon Reduction Initiatives

In the future we hope to implement further measures such as:

- The company has also begun transitioning to lower-emission transport by introducing electric vehicles for the sales team and operating an electric van onsite. These measures form part of the organisation's wider commitment to reducing carbon emissions and improving environmental sustainability.
- The company is currently in discussions with the landlord regarding the installation of solar panels on the building roof as part of its ongoing carbon reduction and sustainability initiatives. The proposed installation would support the reduction of grid electricity consumption and contribute towards lowering the organisations overall carbon emissions
- Higher production over the past year has increased the company's carbon footprint in this reporting period. The business recognises this and is implementing measures to reduce emissions over time. Current initiatives include discussions on installing rooftop solar panels, introducing electric vehicles for the sales team, and operating an onsite electric van. While these actions will take time to deliver measurable results, they are expected to help reduce the overall carbon footprint over the next year and support wider sustainability objectives.

Over the course of the next 10 years, we are looking at migrating our inbound freight transportation from the air to the sea, drastically reducing our Scope 3 carbon footprint. This is likely to be implemented in several implementation waves as highlighted in the CRP above.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.²

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.³

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).
