

UltraGlide®

Surgical Needles

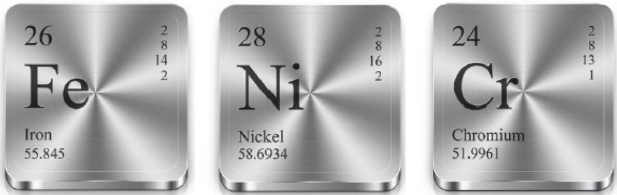

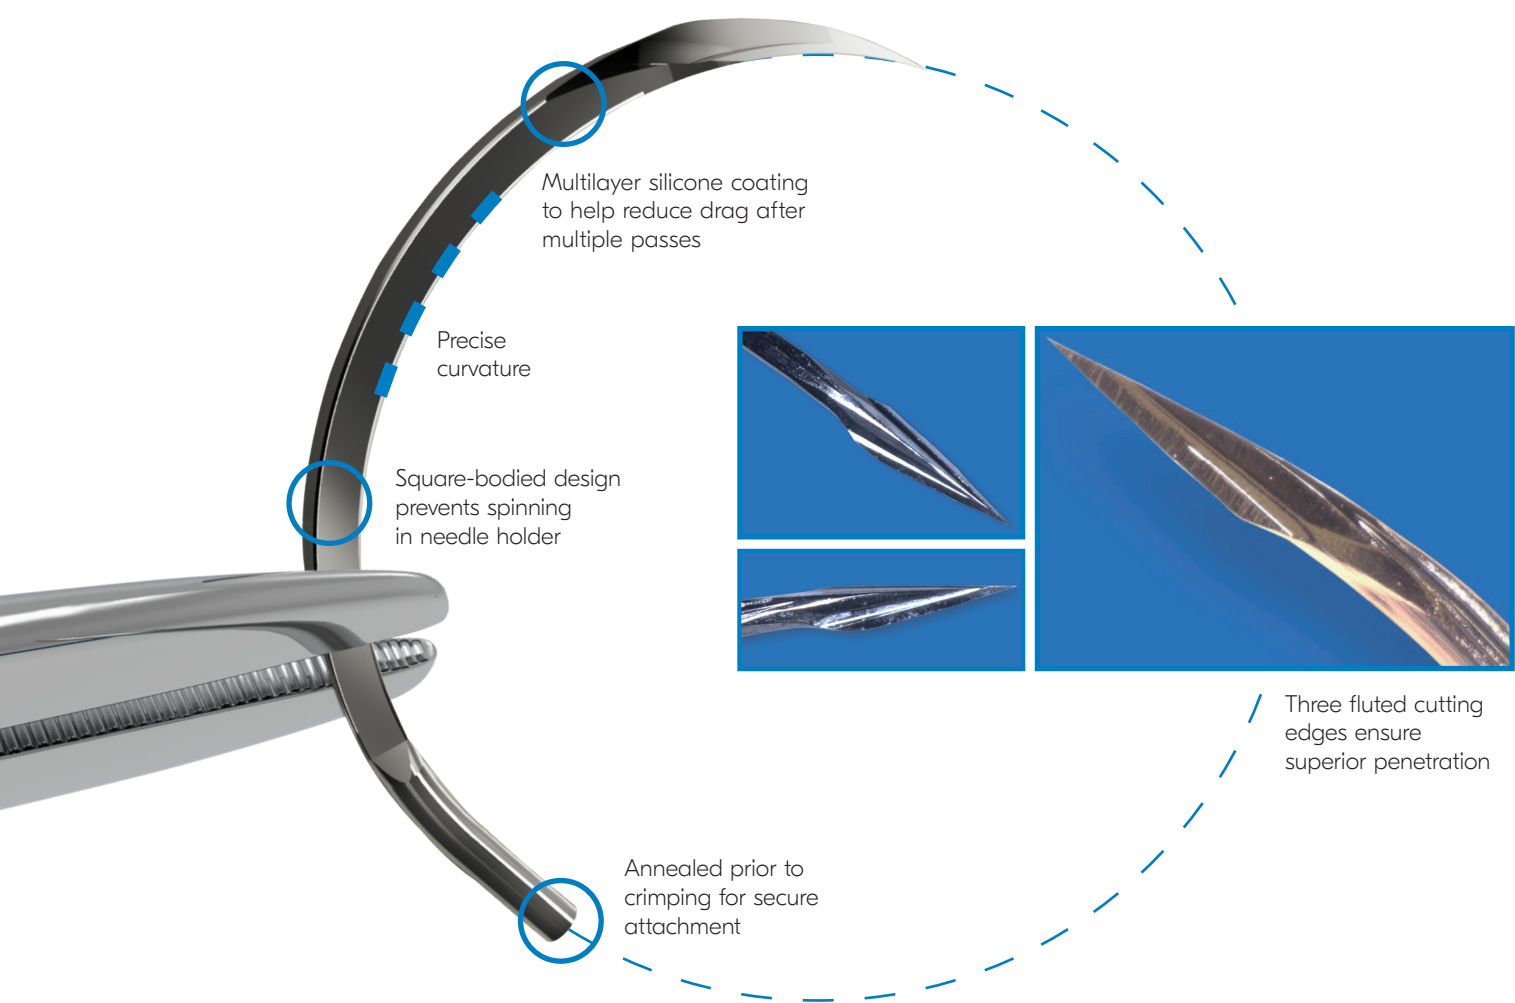

Engineered
for effortless
control.

Experience
new levels of
performance with
SharpPoint® sutures.

UltraGlide® surgical needles provide enhanced control to reduce surgeon fatigue.

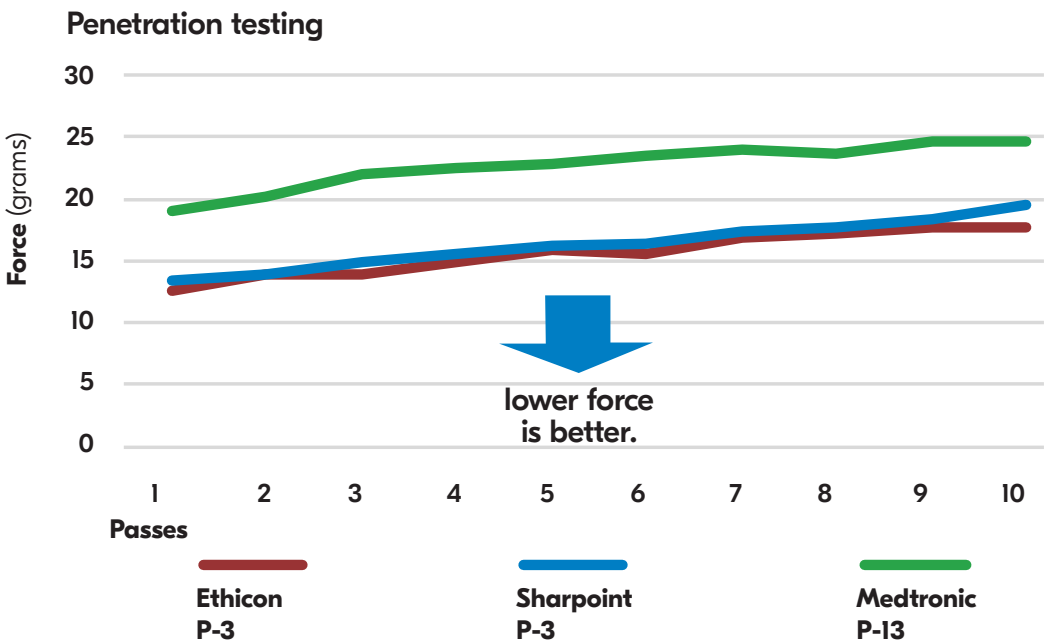

Innovative geometry, premium materials, and silicone coatings work together to produce exceptional needles.

The elements of needle performance.

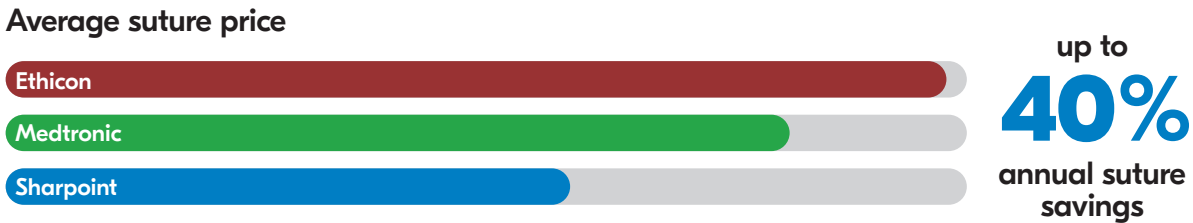

Each element in an UltraGlide needle serves a role in delivering strength, ductility, and hardness for reliable performance under the demanding conditions of surgery.

UltraGlide ensures Sharpoint sutures meet industry-leading penetration performance — pass after pass.

Penetration testing quantifies the force required for a needle to pass through a medium multiple times. 10 passes per needle. Performed by Acculine Engineering; an independent testing facility in Waterbury CT.

Performance doesn't have to be expensive.

UltraGlide needles earn the confidence of surgeons.

"The P-3 needle is very sharp and the curvature allows it to glide easily during my chest closure. It felt very strong and did not bend like other brands I have used. I am a big fan."

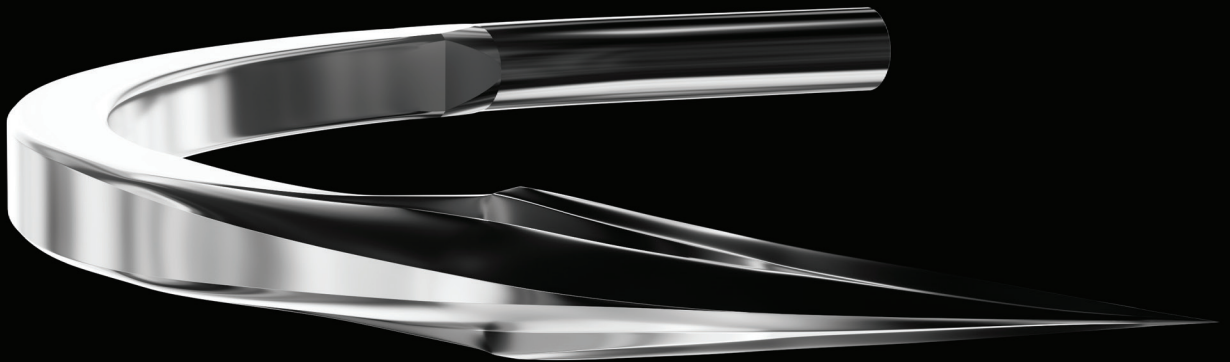

Dr. Noah Weisberg
Skin Cancer Care Specialist
Jupiter, FL

"Sharpoint suture quality is comparable to Ethicon but the value is unparalleled. I've been using Sharpoint over a year now, my suture rep is attentive and helpful, I've never had a suture rep before."

Dr. Nazir Ahmad
Capital Facial Surgery
Raleigh, NC

UltraGlide technology is available on Sharppoint sutures
with precision reverse and precision cutting needles.
