LOO SURGICAL SUTURE

Suture Catalog

Trust in a History of Value.

The LOOK™ line of sutures is one of the best known and most trusted suture brands on the market. From the beginning, these sutures have been known for their quality—and that legacy of quality continues to meet the demands of surgery professionals worldwide. The precision manufacturing of our LOOK™ brand sutures ensures consistent needle strength and durability that holds up to every pass.

LOOKTM Sutures are offered in a variety of absorbable and non-absorbable materials and are attached to needles with superior sharpness, penetration, and strength characteristics. Surgical Specialties Corporation is proud to provide the LOOKTM suture, along with flexible and accommodating customer service, and value to its customers.

Guide to Suture Materials

Absorbable

Material	Material Description	BSR Profile	Mass Absorption
Plain Gut	Twisted • Plain & Chromic • Packaged Dry or in Wetting Solution Common uses: General Closure, OB/Gyn, Urology, Bowel Anastomosis	In vivo strength retention: Varies	Varies depending upon type of suture (plain vs. chromic) and site of placement
Chromic Gut	Twisted • Plain & Chromic • Packaged Dry or in Wetting Solution Common uses: General Closure, OB/Gyn, Urology, Bowel Anastomosis	In vivo strength retention: Varies	Varies depending upon type of suture (plain vs. chromic) and site of placement
PołySyn FA™ (głýcolic gefd) • VICRYL RAPIDE™ * Velosorb™Fast	Braided • Undyed (clear) • Coated Common uses: General Closure, OB/Gyn, Urology	In vivo strength retention: 48% at 7 days 0% at 14 days	Essentially complete between 49 and 63 days
PolySyn TM (glycolic acid) • VICRYL TM * Polysorb TM / Dexon TM	Braided • Undyed (clear) • Dyed (violet) Monofilament • Undyed (clear) • Dyed (violet) • Coated & Uncoated Common uses: Skin Closure, OB/Gyn, Urology, Gastrointestinal	In vivo strength retention: 50% at 14 days 20% at 21 days	Essentially complete between 50 and 90 days

Non-Absorbable

Material	Material Description	Qualities
• PERMA-HAND™ Silk * SofSilk™	Braided • Undyed (white) • Dyed (black) • Coated Common uses: General & Skin Closure, Gastrointestinal, Cardiovascular Surgery, Plastic Surgery, Ophthalmology	Excellent handling and tying characteristics
Nylon • ETHILON TM * Monosof TM /Dermalon TM	Monofilament • Undyed (clear) • Dyed (blue) (black) • Packaged dry or in wetting solution Common uses: General & Skin Closure, Plastic Surgery, Ophthalmology, Microsurgery, Cardiovascular Surgery, Gastrointestinal	Passes easily through tissue
Polypropylene • PROLENE TM * Surgipro TM /Surgipro TM II	Monofilament • Undyed (clear) • Dyed (blue) Common uses: General & Skin Closure, Neurosurgery, Plastic Surgery, Ophthalmology, Microsurgery, Cardiovascular Surgery	Inert Easy to handle Passes easily through tissue
PTFE (Polytetraflouroethylene)	Monofilament • Undyed (white) Common uses: Dental Surgery and General Surgery	Soft and supple material Easy to handle Good knot security Minimal package memory

 $[\]bullet \ \, \text{Comparable Ethicon} \\ ^{\text{TM}} \text{Material} \ \ ^{\star} \ \, \text{Comparable Medtronic} \\ ^{\text{TM}} \text{Material}$

LOOKTM needle performance is an output of its design. Materials, geometry, and coatings work together to produce a high performance surgical instrument.

Proprietary Stainless Steel Alloy

LOOKTM needles are forged from an alloy of Iron, Nickel, and Chromium. Each element serves a role in delivering strength, ductility, and hardness.

Ductility

Hardness

Needle Anatomy And Terminology

Needle Terminology

Length: Distance measured along the circumference of the needle, from the point to the swage. It is depicted on the packaging.

Shape: Different surgeries or surgical techniques demand different needle shapes.

Point: The sharpened part of the needle that first penetrates the tissue. The point consists of the area from the sharpened tip of the needle to the widest cross section of the needle body. The point determines ease of penetration and the initial size and shape of the hole.

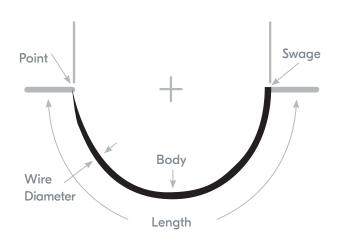

Swage: Connection point of the suture and the needle. Micro teeth grip the suture material and prevent it from slipping out.

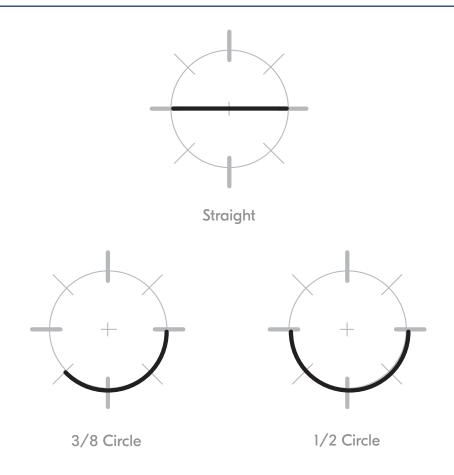

Wire Diameter: Gauge or thickness of the wire originally used to form the needle body.

Body: The part between the point and the swage of the needle.

Included Angle (Curvature): The fraction of the circle included in the curve of the needle. This is depicted on the packaging.

Needle Anatomy

Needle Points and Cutting Edges

Needle Type	Point Geometry	Description	Commonly Used For
Conventional Cutting	\triangle	Triangular point with cutting edge on the inner curvature	General skin closure, subcutaneous tissue, sometimes for ophthalmic surgery, plastic or reconstructive surgery
Precision Conventional Cutting		Triangular point with cutting edge on the inner curvature and precision-honed for added sharpness	General skin closure, subcutaneous tissue, sometimes for ophthalmic surgery, plastic or reconstructive surgery
Reverse Cutting	\bigvee	Triangular point with cutting edge on the outer curvature	Skin closure, ligamentous or fibrous tissues
Precision Reverse Cutting	•	Triangular point with cutting edge on the outer curvature and precision-honed for added sharpness	Primarily used in plastic surgery for delicate procedures and where a good cosmetic result is desired
Taper Point	•	Round shaft, straight or curved, taper point with no cutting edge	Soft tissue closure such as fascia, vascular, gastrointestinal, and most soft tissue below the skin
Taper Cutting		Four (4) cutting edges with a taper shaft	For penetration through tough tissue
Straight Cutting	$\overline{}$	Reverse cutting tip on a straight shaft	General skin closure
